1. Introduction

* Module function: When the host alarms, the output port corresponding to the alarm zone on the module will be open or short circuited.

* Power indicator light: always on when powered on.

* Defense zone status indicator light: It flashes slowly when the defense zone is enabled and normal, and remains on when the defense zone malfunctions.

Note: See the host manual for the number of expansion modules that the host can access. Each module can output 8 channels of switching value. When multiple modules are used at the same time, each module is in parallel with the host's wiring port, and the module's Dip switch cannot be repeated.

* DIP switch: there are four Dip switch on the relay, and the address code can be dialed out. See the host manual for details. The following host dialing methods are for reference.

* BP-AP512NGW - Setting the switch to OFF is valid.

NO.	DIP SW#	Zone#	NO.	DIP SW#	Zone#
1	1111	49~56	6	0101	89~96
